EDUCATION

Cavite State University - Bacoor City Campus Bachelor of Science in Information Technology, Cum Laude (GWA: 1.46)	September 2021 – September 2025
---	--

EXPERIENCE

Cavite State University - Bacoor City Campus Full-Stack Web Developer Intern Bacoor City, Cavite	February 2025 – June 2025
---	----------------------------------

- Built RESTful APIs for the backend of the university’s café point-of-sale system using Next.js and Express.js, improving order processing workflows for staff.
- Resolved backend and database-related bugs by analyzing logs, optimizing query performance, and refining schema design using Prisma ORM and PostgreSQL, reducing response times by 30%.
- Contributed to the development of a web-based automation tool that helped school faculty optimize and manage the student enrollment process more efficiently.
- Collaborated with cross-functional team members using version control and Agile workflows to coordinate code changes, track deliverables, and maintain project transparency across multiple concurrent development cycles.

PROJECTS

OpenScrim – Scrim management tool for Esports teams Technologies: Python, TypeScript, React, Django REST Framework, PostgreSQL, Docker, Vercel	Live Source Code
--	---

- Architected a full-stack scrim management platform for esports teams supporting multi-team roster tracking, match logging, and opponent analytics across multiple game titles.
- Built real-time dashboard aggregating 6+ performance metrics using optimized Django ORM queries with comprehensive unit and integration testing, reducing data retrieval to single API calls.
- Containerized the full stack with Docker Compose, reducing local setup time for users to under 2 minutes.

E-Commerce Web Application for Hufano Handicraft Wooden Decors Technologies: Python, JavaScript, Django Ninja, Next.js, Three.js, Payrex API, Tripo AI API, Supabase Storage, Render, Vercel	Live
--	-----------------------------

- Built a full-stack e-commerce platform with Django and Next.js, shipping a product catalog, order management system, and admin dashboard with interactive sales analytics.
- Enabled customers to order custom 3D-designed woodcraft from text descriptions by building an AI configurator with async task polling and integrating Tripo3D API into a production Django + Next.js platform
- Processed transactions through Payrex payment gateways with webhook handlers supporting various payment methods including GCash and Paymaya for Philippine customers.

Feedback and Evaluation System with Sentiment Analysis Technologies: Python, HTML, CSS, Django, Hugging Face Transformers, PostgreSQL

- Digitized the university’s paper-based evaluation process by replacing manual workflows with an automated system, reducing processing time and enabling real-time analytics.
- Developed a real-time sentiment classification system for student feedback using Hugging Face transformer models, enabling automated insight generation.
- Generated PDF and Excel reports summarizing faculty performance across 35 evaluation criteria.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, TypeScript, SQL, PHP, Java
Frameworks: Django, Django REST Framework, Django Ninja, Flask, React, Next.js, Express.js
Tools & Platforms: Docker, Git, PostgreSQL, Prisma ORM, Vercel, Render, Supabase, Neovim, Opencode
Testing: Pytest, Vitest, Playwright
Concepts: Data Structures and Algorithms, Agile Development, CI/CD, RESTful API Design, Unit and Integration Testing
